Restaurant Row Gives Savvy A Rave Review

FOR IMMEDIATE RELEASE

Tarrytown, NY. — April 15, 2005 — Savvy Networks, Inc. announced the successful completion of a major power infrastructure upgrade project. The project, which took place in phases over a nine month period included the replacement of all critical power components used to power the Savvy data center in Tarrytown. The result was the transition to new transfer switching gear, main breaker panels, Liebert UPS infrastructure, Power Distribution Panels and diesel power generation equipment. Live load testing and final cutover to the new system was performed on March 5th.

Savvy's CEO Christopher Furey said "I am very excited by the expanded capacity of our new power system. These critical upgrades reassure our customers of Savvy's ongoing commitment to their operational assurance and uptime. The upgrades also support the forecasted growth of our business at our Tarrytown facility." "I want to thank the advisors and consultants who were involved in the design and implementation of this project. We especially appreciate the auditing and design work performed by Mark Cavallaro of Current Solutions, as well as Dick Neely's team at Vista Electric, who managed the project and made a complex process painless".

Savvy worked with Rudy Kraus and Howard Uffer at DSA Encore to procure some of the infrastructure including an additional 50 colocation cabinets to expand the customer colo space within the data center. In addition to providing power and colocation infrastructure, DSA is leading a new project to upgrade, increase capacity and improve redundancy of the data center cooling systems. Work on that project is expected to be completed in June.
